Full-Stack Software Developer

Here at Scroll Network, we promote innovation by preserving the mindset that all technological advancement is regenerative and, therefore, originates from the desire to improve upon the current standard.

The duties and responsibilities are subject to change, accommodating the growing start-up environment. We are looking for an experienced full stack developer that can work independently and in teams, as needed. The primary responsibilities are to provide software engineering expertise based on specifications within deadlines. Be a part of a team that works in an agile environment.

Responsibilities:

- Produce clean and efficient code based on specifications within deadlines
- Verify and deploy programs and systems
- Troubleshoot, debug and upgrade existing software
- Recommend and execute improvements
- Create technical documentation for reference and reporting
- Participate in peer reviews
- Collaborate in the Planning the deliveries, sprints, iterations, and estimating the resources required and the cost, prioritizing tasks according to requirements
- Work directly with business areas to define business requirements and translate those requirements into conceptual and logical data models, and user-interfaces
- Research and evaluate alternative solutions; recommends and develops the most efficient and cost-effective solution
- Self-manage small projects when needed

Requirements:

- BSc/BA in Computer Science, Engineering or a related field
- Proven experience
- Fluent in HTML + CSS + JavaScript
- Experience with MongoDB
- Experience with Express
- Experience with Angular5
- Experience with NodeJS
